SUMMARY

Full-Stack Developer and Computer Engineering student with experience developing production-ready web applications, multi-tenant SaaS platforms, and real-time systems. Skilled in React, Next.js, Node.js, Express.js, MongoDB, PostgreSQL, TypeScript, REST APIs, authentication, RBAC, and cloud deployment. Experienced in building secure, scalable applications from frontend development to backend architecture and deployment.

SKILLS

Languages	JavaScript, TypeScript, Python, HTML5, CSS3
Frontend	React, Next.js, Tailwind CSS, Redux Toolkit, Zustand, Three.js, GSAP
Backend	Node.js, Express.js, Fastify, FastAPI, REST APIs, WebSockets, Socket.IO
Databases	MongoDB, PostgreSQL, Prisma ORM, SQLite, IndexedDB
Security/Auth	JWT, OAuth2, Role-Based Access Control (RBAC), TOTP (2FA), Helmet, Rate Limiting
Cloud & DevOps	Docker, GitHub Actions, AWS S3, Cloudinary, Firebase, Vercel, CI/CD
Tools	Git, GitHub, Postman, Playwright, Vitest

EXPERIENCE

Web Development Intern — June 2026
InAmigos Foundation

- Built responsive web pages and interactive frontend applications using HTML, CSS, React, Next.js, and Tailwind CSS.
- Performed a website audit covering responsiveness, SEO, accessibility, and user experience, providing recommendations for improving the organization's website.
- Designed UI concepts in Figma and developed ImpactPulse, a dashboard for visualizing NGO impact metrics using React and Recharts.

PROJECTS

AutoSecure — Enterprise Security & Admin Platform — Live
Next.js 15, React 19, TypeScript, Express, MongoDB, AWS S3, Recharts

- Architected a production multi-tenant SaaS platform for insurance agencies to manage policy lifecycles, driving licenses, and client KYC compliance records.
- Engineered tenant-isolated data models in MongoDB, secured RESTful APIs in Express/TypeScript, and integrated JWT authentication with Role-Based Access Control (RBAC).
- Automated policy renewal notifications and quota tracking across organizations, eliminating manual spreadsheet overhead while ensuring regulatory compliance and auditability.

Chronicle — Self-Hosted Media Tracker & Android App — GitHub | Live
Next.js 16, React 19, TypeScript, Zustand, MongoDB, Cheerio, Firebase FCM, Kotlin

- Built a self-hosted library for Anime, Manhwa, Donghua, and Light Novels with responsive web workflows and a Kotlin Android shell that preserves authenticated sessions and handles offline states.
- Engineered a bounded cron pipeline with direct Cheerio scraping, proxy fallback, safe work rotation, and delivery-aware retries without overwriting user-controlled reading progress.
- Delivered an exact-delta updates inbox, fractional chapter tracking, analytics, JSON import/export, and update alerts through Firebase Cloud Messaging and Telegram.

ShadowCore — Real-Time Discord Dashboard & Bot Manager GitHub
Node.js, Express, Socket.io, Discord.js, Passport OAuth2, MongoDB

- Developed an event-driven server operations platform and bot controller to manage high-volume Discord communities, automated moderation, and live activity tracking.
- Co-located Express REST APIs and Discord.js v14 in a single runtime, streaming real-time metrics via full-duplex WebSockets (Socket.IO) and authenticating sessions via Discord OAuth2.
- Eliminated inter-process communication latency for zero-delay bot administration, delivering instantaneous audit logging and role-synchronization across administrative surfaces.

Luxora — Premium Full-Stack E-Commerce Platform GitHub
Next.js, Redux Toolkit, Node.js, Express, MongoDB, Cloudinary

- Designed a scalable multi-role e-commerce web application featuring domain-isolated boundaries and role-scoped permissions for shoppers, vendors, and platform admins.
- Constructed modular RESTful API endpoints in Express/MongoDB, managed granular client state slices with Redux Toolkit, and streamed media to Cloudinary CDN via Multer buffers.
- Decoupled vendor catalog operations from shopper checkout funnels, optimizing media asset delivery latency and automating transactional order confirmation emails.

Portfolio — Interactive 3D WebGL Terminal Experience GitHub | Live
Next.js, Three.js, React Three Fiber, GSAP, Zustand, Lenis

- Built a high-performance interactive 3D portfolio featuring a virtual retro terminal, spatial navigation, and dynamic project case studies rendered in real time.
- Engineered 3D scene graphs using Three.js and React Three Fiber, synchronized WebGL canvas state with DOM modals via Zustand, and driven by GSAP timelines and Lenis physics.
- Achieved 60 FPS GPU-accelerated rendering through geometry instancing and asset optimization, maintaining full responsiveness and accessible mobile fallback controls.

EDUCATION

Bachelor of Engineering (Computer Engineering) Expected 2027
Ahmedabad Institute of Technology, Ahmedabad

CERTIFICATIONS

AIT Hackathon — 1st Place 2025
Built a Secure WiFi Gateway using Python and Raspberry Pi with captive-portal authentication and admin dashboard.
Certificate: View Certificate
