SUMMARY

Full-Stack Developer and 3rd-year Computer Engineering student building production-grade web applications with emphasis on security, real-time systems, offline-first architecture, and immersive UIs. Proven ability to own features end-to-end — from database design to deployment and monitoring. Ready to deliver measurable engineering impact from day one.

SKILLS

Languages	JavaScript (ES6+), TypeScript, Python, HTML5, CSS3
Frontend	React 19, Next.js (App Router), Tailwind CSS, Zustand, Three.js, GSAP
Backend	Node.js, Express, Fastify, FastAPI, REST APIs, WebSockets (Socket.io)
Databases	MongoDB (Mongoose), PostgreSQL, Prisma, IndexedDB (Dexie.js), SQLite
Security/Auth	JWT, OAuth2 (Passport), TOTP (2FA), RBAC, Helmet, Rate Limiting
DevOps & Tools	Git, Docker, AWS S3, Vercel, GitHub Actions, CI/CD, Playwright, Vitest

PROJECTS

AutoSecure — Enterprise Security & Admin Platform

GitHub

Next.js 15, React 19, TypeScript, Express, MongoDB, AWS S3, Recharts

- Built a secure monorepo platform for policy enforcement and license management, featuring RBAC with 3+ granular roles and audit logging.
- Integrated TOTP-based 2FA using Speakeasy and enforced route-level permissions via middleware guards.
- Visualized system analytics with Recharts and implemented file backup workflows using AWS S3 SDK.

Chronicle — Self-Hosted Media Tracker

GitHub — Live

Next.js App Router, Zustand, MongoDB, Cheerio, Vercel Cron, Telegram API

- Created a media tracker for Anime/Manhwa with automated chapter detection via web scraping (Cheerio) and scheduled Vercel cron jobs.
- Enabled cross-device sync and persistent local state using Zustand + MongoDB, with push notifications via Telegram bot.
- Ensured reliability with Vitest unit tests and serverless API routes for metadata fetching and import/export.

ShadowCore — Real-Time Discord Dashboard & Bot Manager

GitHub

Node.js, Express, Socket.io, Discord.js, Passport OAuth2, MongoDB

- Engineered a unified backend running both Express API and Discord bot in one process for zero-latency command execution.
- Implemented real-time dashboard updates via WebSocket events (user joins, message deletes, moderation logs).
- Secured login flow with Discord OAuth2 and persisted sessions using express-session + connect-mongo.

Luxora — Premium Full-Stack E-Commerce Platform

GitHub

Next.js, Redux Toolkit, Node.js, Express, MongoDB, Cloudinary

- Developed a multi-role e-commerce system (User/Seller/Admin) with JWT auth and global state managed via Redux Toolkit.
- Streamed product images directly to Cloudinary via Multer middleware for optimized delivery and storage.
- Designed RESTful APIs with role-scoped endpoints and integrated Nodemailer for transactional emails.

Portfolio — Interactive 3D WebGL Terminal Experience

GitHub — Live

Next.js, Three.js, React Three Fiber, GSAP, Zustand, Lenis

- Designed a cinematic 3D portfolio experience using React Three Fiber and Three.js, replacing traditional scrolling with immersive navigation.
- Synchronized DOM modals with WebGL canvas state using Zustand and animated transitions via GSAP timelines.
- Implemented smooth scroll physics with Lenis and built mobile-responsive fallback terminal UI for touch devices.

EDUCATION

Bachelor of Engineering (Computer Engineering)

Expected 2027

Ahmedabad Institute of Technology, Ahmedabad

CERTIFICATIONS

AIT Hackathon — 1st Place

2025

Built a Secure WiFi Gateway using Python and Raspberry Pi with captive-portal authentication and admin dashboard.
